Human Fluid Dynamics Befuddles A Zealous Yankee

Tis thru unsuspected perusal of observation sans animals and small children,
how erratic movements accentuate self propelled locomotion
when ambulatory creatures other than human lamb kin
hood winks, ponders locus, thence hurriedly darts hither and yonder,
to and fro with no evinced premeditation viz expenditure erratic energy
even chilly reaching the vector of fatigue and famished fate accompli
point of exhaustion (or incurring fatal collision),
yet if oblivious artful dodger safely achieves spontaneous reconnaissance
asper reaching destination, thence resupplying renewable resources
to wren door hypothetical specimen to resume (once again...ad infinitum)
haphazard random zigzag engine aired flapdoodle previous
un-choreographed motions, and/or spurious en hex pick able darting,
kickstarting, or oscillating arrhythmically might not register as purposelessness
not conceived as a reckless, mindless, or foolish van hail 'n impression
though, to a sensate Homo Sapien (such as myself),
this bing bong, harried styled, illustration of convincingly
being inebriated, gripped or possessed by a deem man
unbeknownst as this non intrusive behavioralist
silently observes, how much inefficiency did ban
did vis a vis sans indeed erratic buzz-feeding, high-lighting,
or net-resulting calories this grand Poobah calculates,
and tires merely watching oscillating, quaking, skittering,
concluding that twittering, snap chatting, reddit ting
tote tills up to enough vim and metaphorical vinegar
expended clan dust stand lee allowing, enabling, providing
avast capitalone major resultant calculus
that what appears as dubious, erroneous, frivolous, et cetera
such random motion might actually contribute exemplary survival phenomena
adding years exceeding google times ten to keenly studied subject.
